

Secure your data, secure your future.  
**Leave the security to us.**

## Strategic security solutions for your business or organization

Our managed security service provider (MSSP) program ensures security monitoring and management of computers, servers, mobile devices, applications and network devices at what level of need is required for your businesses' data and compliance requirements. The team of highly skilled security and compliance engineers along with our Virtual Information Security Officers are here to help you navigate the always changing IT security landscape. Cantey Tech Consulting will help you identify, protect, detect, respond and recover to all your cybersecurity needs.

### Meet Cantey Tech Consulting

Based in South Carolina, Cantey Tech Consulting provides comprehensive IT services for businesses and organizations across the country. Our experience allows us to understand your company's unique security needs. Our expertise enables us to deliver complete solutions, responsive service, and dependable support. Rather than offering generalized products and recommendations, we take a consultative approach that prioritizes partnership. By listening to your security needs and delivering precise solutions, we make it easier for you to focus on what matters most — your business or organization.

- Patch Management

# Customized Solutions. Personalized Service.

Through our consultative approach and a flat-fee pricing model, we provide comprehensive, cost-effective secure IT solutions that make sure your business or organization meets the needs of the ever changing security landscape.

Network  
Security

Compliance  
and Audits

Managed  
Security

## Endpoint Security with Endpoint Detection and Response (EDR)

Endpoint Security has passed the abilities of standard anti-virus tools. Your end devices (desktops, laptops, servers and mobile devices) need artificial intelligence (AI), machine learning, root cause analysis, content/web filtering, application control and firewall management to be secure.

## Security Appliances (Firewall)

Proper deployment of firewall rules, geo-blocking, bandwidth controls, application management, intrusion detection and malware security keep the edge of your network secure.

## Email Security and Encryption

Securing email goes beyond spam filtering as companies deal with phishing attempts, malicious links, CEO impersonations and weaponized attachments. Protect your sensitive company information that needs to be delivered securely and encrypted to protect the confidentiality of the data.

## Mobile Device Management (MDM)

MDM helps companies monitor, enforce policy, manage and ensure the security of company data whether employees are using company devices or personal owned mobile devices such as smartphones and tablet.

## Disk Encryption

Keeping your data protected if a laptop, smartphone, tablet or USB drive is lost or stolen, is as important as locking your front door. Data has value and your organization should not just give it away to anyone.

## Security Audits

Today's IT security landscape is ever-evolving and needs constant review. Our security team can perform a security audit for your business based on your company's size and compliance mandates. (HIPAA, PCI, NIST, CMMC, SOX, etc.)

## Vulnerability Assessments

Our security engineers will go through the process to define, identify, classify and prioritize vulnerabilities in your computer systems, applications and network infrastructure. If vulnerabilities are identified, the team will provide your organization a plan of action to remedy or limit the risk with each vulnerability.

## Policy and Procedures

Written and approved IT policies show a company's security posture and build a foundation for how employees, computers and network devices are secured. We can build these policies and supply best practice recommendations.

## IT Compliance Management

Keeping up with the all the policies, controls, settings, and compliance evidence needed by your organization is a daunting task. Our security team can maintain all necessary documentation and evidence for your organization to prepare for an external audit.

## Backup and Disaster Recovery

Your last line of defense is a thoroughly thought out backup and disaster recovery plan. Cantey Tech can design a secure strategy to help your business get on-line quickly after a security incident. Backups are only good as your last backup test. When was the last time you tested?

## Virtual Information Security Officer (vISO)

As our flagship security offering, we provide ongoing expertise and oversight for your security needs. Your company will be provided detailed guidance, reporting and resolution planning on a reoccurring basis.

## Security Operations Center (SOC)

Sleep better at night. The SOC monitors all internet traffic and log sources (servers, network devices, computers, applications, endpoint security, email security, email provider, etc.) for malicious traffic and anomalies, 24/7, 365 days a year.

## Patch Management

Maintaining proper security patching on your computers, servers and network equipment can be challenging. Our network operations team can keep your systems properly maintained on a routine schedule, and if a critical update can't wait, can expedite the installation of the patch as needed.

## Security Awareness Training

The weakest link in you security posture will always be your employees unless you give them proper training and testing. Cantey Tech can help make the chain stronger.

Whatever your technology challenges may be, Cantey Tech Consulting is ready to deliver the customized solutions you need.

To schedule a consultation or to learn more about our all-inclusive, fixed-price IT support services, visit [canteytech.com](http://canteytech.com) or call (843) 278-1827.
